Theories of Economic Development

Economics 207 delves into various theoretical frameworks that explain how economies develop over time. These theories can be broadly categorized into traditional, modern, and contemporary approaches:

- Linear Stages of Growth Model: Postulates that economies pass through distinct stages: traditional society, preconditions for take-off, take-off, drive to maturity, and age of high mass consumption.
- Structural-Change Theories: Focus on sectoral shifts, emphasizing the importance of transforming agriculture-based economies into industrial and service sectors.
- Dependency Theory: Highlights external factors, such as colonialism and global capitalism, as barriers to development, stressing the importance of self-reliance.
- Endogenous Growth Models: Incorporate internal factors like technological innovation, human capital, and knowledge spillovers as drivers of sustained growth.
- Basic Needs Approach: Prioritizes meeting fundamental needs like food, healthcare, and education as the foundation for development.

Understanding these diverse theories equips students to analyze development processes from multiple perspectives, acknowledging both internal dynamics and external influences.

Key Components and Dimensions of Economic Development

1. Economic Indicators and Measurement

Assessing economic development requires reliable metrics that go beyond GDP figures. Key indicators include:
